

Fruit and vegetable washer elevator mill MAXIMILL 1000

Fruit washer elevator mill MAXIMILL 1000 is designed for washing, transporting and milling of fruits, berries and vegetables before further processing.

Firstly, products are washed in the washing tub with clean water. Then conveyor lifts the products up to the mill which crushes them into a mash. The fruit or vegetable mash falls out of the mill for further pressing or destoning process.

Output – 1000 kg/h

- The crushing head of the machine is round, so all the crushed mash goes directly out for further processing. This feature significantly helps when washing the head as there are no corners.
- Our round shape technology is superior to other producers', because a lot of fruit mash gets stuck in the corners of square-shaped heads for hours and can cause juice fermentation!
- Machine has additional table in front of the basin for putting fruits or boxes on it.
- V form washing basin helps fruits and vegetables move directly to the elevator, therefore less fruit stay in the basin.
- Integrated water-spraying system provides additional washing when lifting the fruits up the elevator.
- Belt conveyor has a water drainage and speed regulation system.
- Optional replaceable cutting graters/sieves are available for different fruits and berries.
- The mill does not damage the fruit seed.
- Powerful 2.2 kW crushing engine can crush various fruits, berries and vegetables – from soft raspberries to hard apples, beets, etc.
- Machine is entirely made of stainless steel.

Output	kg/h	1000
L	mm	3440
L1	mm	2935
W	mm	630
W1	mm	200
H	mm	2300
H1	mm	1370
H2	mm	700
AxB	mm	840x570
