

## Sorting conveyor

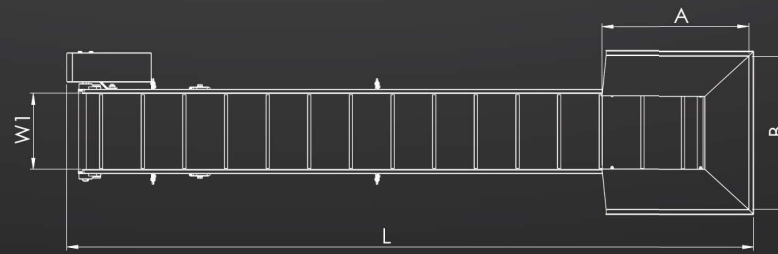

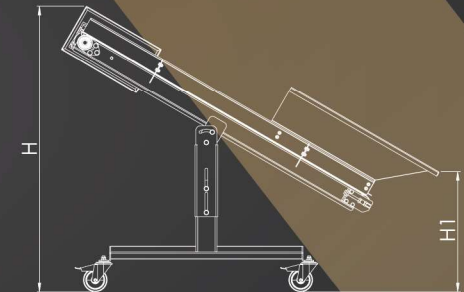

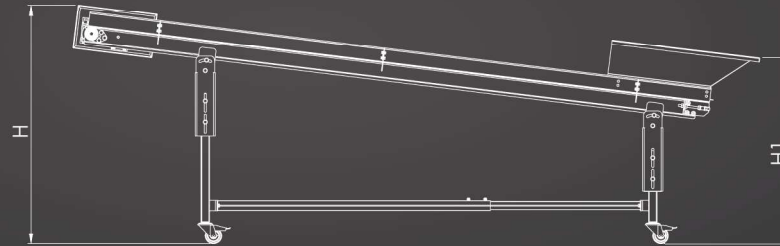

Sorting conveyor is used in a fruit, berry and vegetable processing line for sorting and drying the products. Sorting conveyor transports products from one machine to the other. It can be used in two ways. One way is to use the machine for sorting the products after they are washed by AQUA 3000. Another way is to use sorting conveyor before the UNLOADER if fruits are already clean and ready to be sorted.

We produce sorting conveyors in two different lengths: 1,5 m and 3 m length. We also accept individual orders for conveyor with different measurements.

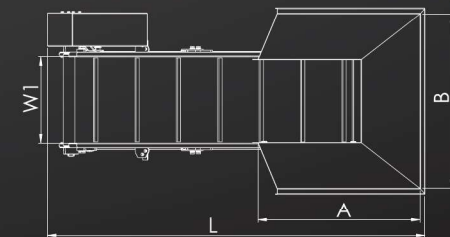

- Standard measurements: 1500×400 and 3000×400 mm.
- Simple and user-friendly maintenance.
- Convenient sorting tape suitable for various-sized products: from small berries like raspberries to big fruits like mango, pineapples, etc.
- Machine is mounted on pivoting wheels.
- Sorting conveyors are easy to clean after using.

		SC - 1500	SC - 3000
